Electrify America Begins Electric Vehicle Charging Site Selection Process in California

Community and Highway Site Selection for over 100 Fast Charging Sites Will Begin Immediately

Reston, Virginia (August 2, 2017) – Electrify America is looking for places to put shovels – and electric vehicle (EV) chargers – in the ground. Following the approval of its [Cycle 1 Zero Emissions Vehicle \(ZEV\) Investment Plan](#) by the California Air Resources Board on Thursday, July 27, Electrify America is immediately getting to work by starting its site selection process for over 100 electric vehicle fast charging locations across California.

Electrify America has contracted JLL to source qualified locations and provide site feasibility studies for community charging stations in Los Angeles-Long Beach-Anaheim, Sacramento-Roseville-Arden Arcade, San Diego-Carlsbad-San Marcos, San Francisco-Oakland-Hayward, San Jose-Sunnyvale-Santa Clara, and the Fresno metro area as well as charging station sites along major California highways. Sites will be located within targeted areas determined by supply-and-demand gap analysis down to the census tract level as outlined in the ZEV Investment Plan for California.

“These new charging locations will make it easier for millions of Californians to charge their electric vehicles,” said Mark McNabb, CEO of Electrify America. “We are excited to be getting our team up and running and to be putting these investments to work in communities across the state.”

Charging locations are being selected for their visibility and accessibility to major highways and thoroughfares in addition to proximity of retail. Each site will provide open and universal access to the next generation of EV charging technologies including up to 150kW charging speeds within metro areas and up to 350kW charging speeds along highways, enabling drivers of future fast-charge capable EVs to recharge a 200 mile EV in as little as 15 to 30 minutes. Electrify America also plans to build charging stations at multi-family homes and workplaces as part of its commitment to increasing ZEV adoption in California. About Electrify America

Electrify America LLC, which is headquartered in Reston, Virginia, will invest \$2 billion over the next 10 years in Zero Emission Vehicle (ZEV) infrastructure and awareness. The investment will enable millions of Americans to discover the benefits of electric driving and support the build-out of a nationwide network of workplace, community and highway chargers that are convenient and reliable.
